VII. FAQ

Q: Will all the channels I receive be High Definition (HD)?

A: Not all digital signals are High Definition (HD). Make sure you are using a High Definition Television (HDTV) with built in ATSC tuner. When connecting the antenna to a third-party receiver, make sure it is capable of receiving HD. Otherwise no HD channels can be picked up.

Q: Can you put the antenna behind the TV?

A: Yes, but it may not be the ideal location for the antenna. The TV will block some of the signal, which will weaken the signal.

Q: Are channel lineups available?

A: No. The channels you can receive depend on many complex factors such as distance to the transmitting antennas, your height above ground, the compass reading, trees blocking a clear view, etc. The good news is that once you use scan function of your TV you will see what channels were found.

Q: Is this just like a freeview box?

A: No, it's just an aerial that plugs into back of your freeview-enabled TV, so you can have a TV anywhere in house without having to run cables all over the place. Works a treat and we can get all the usual freeview channels including digital radio in the spare bedroom.

Q: How many channels can I receive?

A: The number of channels you can receive will be determined by what is being broadcast in your area. Channel reception will vary from location to location based on terrain (including trees, buildings, hills and mountains). The fewer obstructions, the better your chance of receiving strong digital signals. Go to <http://itdv.gov/napa>. Enter your address for a listing of likely channels available in your area.

VIII. Troubleshooting

- Check to make sure you have correctly connected the antenna to your HDTV or third-party HD receiver.
- Reposition the antenna in a different location. Maybe higher on a wall or close to a window? Facing the direction of the broadcast tower is usually best. Signal strength will vary based on certain conditions. Distance from the tower, hills, buildings and even tall trees can impact reception. Always re-scan for channels after moving the antenna.
- If a channel is missing, try turning the antenna 10 or 20 degrees in either direction to avoid reflection or move the antenna, and then re-scan the channel.
- The picture or sound freezes while I am watching a channel, or there are boxes in the picture. This is often caused by a weak or intermittent signal. Try moving the antenna to a different location or aiming it in the direction of the broadcast tower for that channel.
- Not all digital signals are High Definition (HD). Make sure you are using a High Definition Television (HDTV) with built in ATSC tuner. When connecting the antenna to a third-party receiver, make sure it is capable of receiving HD. Otherwise no HD channels can be picked up.
- If your TV doesn't have a digital-TV format input option, your TV doesn't have a tuner and is playing snowflake video, so you'll need to buy a set-top box.
